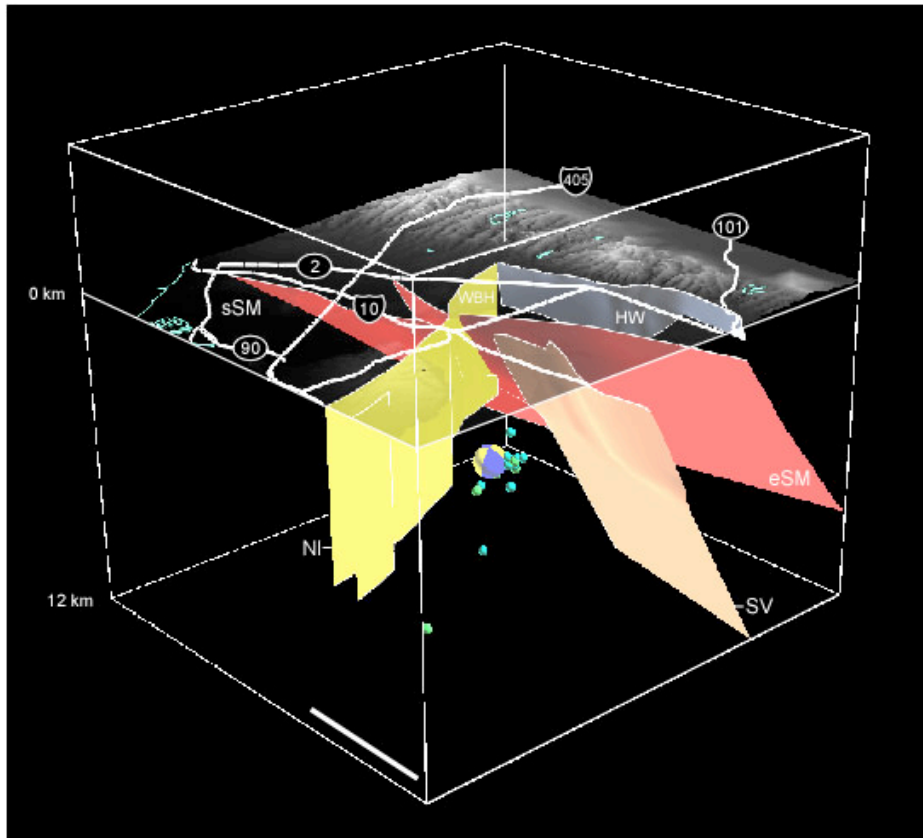

Fig.2: Perspective view of the faults (NI=Newport-Inglewood fault, WBH=West Beverly Hills Lineament, SV=San Vicente fault, sSM=Santa Monica (Southern Strand) fault, eSM=eastern segment of the St. Monica fault which coincides in parts with the North Salt Lake fault, HW=Hollywood fault) in the vicinity of the earthquake. The focal mechanism of the main shock is represented as a large sphere (600 m radius), and the aftershocks as small spheres (blue and green). Topography is shown as a grey, transparent and shaded DEM.
